

1. Purpose

This SOP explains how employees should submit a purchase request.

2. Step-by-Step Process

Step 1: Identify Business Need

The requester must clearly define:

- What is required
- Why it is required
- Which team will use it
- Expected business benefit

Step 2: Check Approved Vendor

Before submitting a request, the employee should check whether the vendor is already approved.

If the vendor is not approved, vendor onboarding must be completed first.

Step 3: Prepare Purchase Request

The request must include:

- Requester name
- Department
- Product or service name
- Quantity
- Vendor name
- Estimated amount
- Business justification
- Urgency
- Required delivery date

Step 4: Submit Request

The request should be submitted through the official procurement system or SharePoint purchase request form.

Step 5: Approval Review

Approval depends on purchase amount and category.

Software, cloud, and security-related purchases require additional IT and Security review.

Step 6: Procurement Processing

Procurement will:

- Validate vendor
- Review quotation
- Check approval level
- Negotiate if required
- Issue purchase order

Step 7: Completion

After approval, the purchase order is created and shared with the vendor.

3. Request Status Values

Status	Meaning
Draft	Request is incomplete
Submitted	Request submitted for review
Pending Approval	Waiting for approval
Approved	Request approved
Rejected	Request rejected
Vendor Review Required	Vendor is not approved
PO Created	Purchase order created

4. Good Business Justification Example

“20 laptops are required for onboarding new developers joining the engineering team next month. The devices are needed before the joining date to avoid productivity delay.”

5. Weak Business Justification Example

“Need laptops for team.”

6. Rejection Reasons

A purchase request may be rejected if:

- Vendor is not approved
- Business justification is weak
- Amount exceeds budget
- Approval is missing
- Required details are incomplete
- Purchase violates company policy

7. Escalation

If a request is urgent, the requester may ask Procurement to mark it as high priority. Emergency requests must include business impact.
